

Procurement with Kissflow

Digital Workplace for Procurement

Have you adopted to a new way of optimizing your procurement process cycle?

Poor Supply chain transparency/ Process inefficiencies:

Does your current system lack visibility over the entire supply chain management?

Solution:

DWP helps in automating a number of tedious processes that are prone to human errors.

Kissflow helps in building and automating workflows in executing urgent orders and contingencies during critical shortages.

Visibility features in Kissflow provide actionable insights that provide better guidance in the decision making process.

Inaccurate Data

Facing challenges in accessing the accurate data leading to problems like inventory shortage?

Solution:

Integrate Kissflow with the right data from the third party applications like SAP. A robust collaboration between finance and procurement team with the help of internal integration with Kissflow can build a better market presence.

BPM solutions not only create an opportunity to improve efficiency; they also pave the way for procurement teams to play a strategic role in accelerating innovation.

Kissflow allows procurement teams to easily share data and help cross-functional teams develop solutions with suppliers and internal stakeholders.

Managing Stakeholders/ Stakeholder Engagement

Facing a difficulty to manage and coordinate tasks between stakeholders?

Solution:

Kissflow has a unique feature, the round robin option and least loaded option, to distribute tasks in rotation and allocate tasks to the stakeholders who have the least task respectively.

Significant ROI - DWP helps actively in cutting the costs on a daily basis for a quick and positive ROI.

Automation with the modern Digital workplace is the way to overcome these challenges.

Long Process Cycle

Many times products are ordered in urgency to complete a project within deadline. Proper steps and cycles are not followed in the procurement process cycle. This leads to failure to execute the proposal on time leading to poor delivery.

Solution:

Kissflow's library of fully built tools specifically made to handle the processes within the P2P cycle. Kissflow helps you to streamline and build structured workflows. This is a tool designed to help your procurement team take care of its own efficiency.

Kick off less preferred vendors off your list which helps you reduce time, You can choose to simply prioritize the ones your team prefers. This is a less-destructive means to the same objective: rationalizing the supplier base.

Risk management and mitigation/ Information overload

**Unsure how to mitigate the risk
in the supply chain relating to compliance,
potential fraud and sourcing risks?**

Solution:

With Kissflow you can centralise your data source, map and monitor your suppliers. Digital workplace helps in advance planning and scheduling.

Shift to sustainable sourcing that takes into account the overall cost of doing business in terms of people, planet and profits can mitigate risk.

Users can access their data from both desktops and mobile devices, and with triple-checked verification, everything from purchase order reviews and approvals to supplier evaluation and shipping performance reviews is faster and more accurate.

Risk management is simplified and streamlined with greater data transparency and shared information for all stakeholders. Reporting, analytics, and audits are more accurate, complete, and efficient.
